

Lesson 1 Coding Activities

Download the zipped .java starter files with the program templates, and use them in DrJava or an IDE of your choice, to get a head start on the activity.

Come to the forum with your questions and to share your test cases.

1. Write a program to print your name to the center of the output screen. Use tabs or spaces to center your output, depending on how wide your screen is. For the code-runner, only one tab or space will be needed for your program to be counted as acceptable.
2. Write a program to print your name to the center of the output screen on three different lines.

For an extra *challenge*: complete this problem using only one line of code.

3. Write a program to output the following:

```
*****  
* java *  
*****
```
